

| Bugs | Image | Why did the issue occur | How it was resolved |
|---|---|--|---|
| In views.py, calling [modelName].objects – results in a pylint error “class [Model] has no objects member” |  | Unsure | Checked in PEP8 – PEP8 did not pick on this, therefore did not change it. |
| Bookings model contains a time field which takes on choice values. When returning the string method, the preference was to have the time display the value of the choices rather than the keys for them – however the get_time_display caused a pylint error “Instance of ‘Booking’ has no get_time_display member” |  | Unsure – all suggestions on stackoverflow suggest using get_time_display | Checked in PEP8 – PEP8 did not pick on this, therefore I did not change it. |
